

IE5 – Buttons & Pictures not showing on the Internet

You are accessing the Internet, and on every page that you access none of the pictures, advertisements, or buttons, are visible. All you get is the outline of where they would normally show (ie. a blank box) with **three** little shapes in the top left corner of each box (the shapes are a triangle, a square, and a circle).

What has caused this ?

In our experience here at Answers That Work, this problem almost always occurs after the installation of software. In most cases this is caused by a bug in the installation software, while in a few cases the software asked you, the end-user, if you wanted to improve your speed of access to web pages, you answered “Yes” but the software never explained clearly that the result would be that you would no longer be able to view pictures, graphics, etc...

How do I solve it ?

- While in Internet Explorer, go to the **Tools \ Internet Options** menu.
- Choose the **Advanced** tab.
- Scroll down to the **Multimedia** section.
- Tick the **Show Pictures** box.
- While you are at it, also tick the **Show Image Download Placeholders** box.
- Click **OK**.
- That's it. You're done.**
